

RECLAMATION

Managing Water in the West

Draft Environmental Assessment

Westlands Water District, San Luis Water District and Metropolitan Water District of Southern California 2010-2011 Water Exchange and Transfer Program

EA-10-71

Mission Statements

The mission of the Department of the Interior is to protect and provide access to our Nation's natural and cultural heritage and honor our trust responsibilities to Indian Tribes and our commitments to island communities.

The mission of the Bureau of Reclamation is to manage, develop, and protect water and related resources in an environmentally and economically sound manner in the interest of the American public.

Section 1 Purpose and Need for Action

1.1 Background

Three full years of drought followed by continued dry conditions early in the 2010 rainfall season resulted in reduced south-of-Delta Central Valley Project (CVP) water allocations. This situation was followed by extraordinarily high late season rainfall throughout the state. Water supply allocations however, remained below 50 percent levels for both the State Water Project (SWP) and CVP's contractors relying on Delta exports south-of-Delta because of the severity of the drought. The recovery from three consecutive years of drought will take more than one year to rectify, and options to expedite a recovery should be considered. It is anticipated that in this fourth year of reduced water supply allocations, the California Department of Water Resources (DWR) and the Bureau of Reclamation (Reclamation) will continue to expedite water transfers and exchanges, and the State Water Resources Control Board (SWRCB) will again approve the consolidation of the places-of-use and the points-of-diversion between the SWP and CVP to facilitate those transfers and exchanges.

Westlands Water District (WWD) and San Luis Water District (SLWD), hereafter referred to jointly as the “Exchangers”, each receives their principal water supplies under contract with Reclamation. Due to ongoing constraints on their CVP water supplies, the Exchangers are consistently experiencing water shortages and have pursued various options to obtain supplemental water to their CVP supplies. As a result, the Exchangers acquired substantial additional water supplies in 2009 at significant expense that were carried over for use in 2010. Due to an unexpected increase in 2010 water allocations, the Exchangers now have water stored in San Luis Reservoir (SLR) that is surplus to their 2010 water needs.

1.2 Purpose and Need

If there is insufficient storage space in SLR to store CVP water, based on Reclamation's rescheduling guidelines, various types of SLR water will be evacuated based on priority as soon as possible upon notice from Reclamation (“spilling”). The Exchangers are concerned that their ability to carry over their rescheduled 2009 CVP water and their 2010 allocated CVP water in SLR into the 2011-2012 contract year will be limited. Therefore, the purpose of the proposed project is for the Exchangers to reduce the risk of spilling their 2010 CVP water supplies currently stored in the SLR. The Exchangers need to preserve their supplies for future use.

In addition, MWD wants to replenish their reserves with the portion of water left in-district as part of the agreed terms. MWD has had to draw from their storage reserves because of the drought and increased demand, as a result, these reserves have been reduced to critical levels, and the district needs additional water supplies to replenish the reserves.

1.3 Scope

The Exchangers have agreed on the terms of the 2010 delivery of their CVP water to MWD, and the subsequent return of MWD's SWP water in contract year 2011, and have requested

Reclamation approval. The Federal Action involves both an “exchange” of water because two-thirds of the water delivered to MWD would be returned to the Exchangers and a “transfer” of water because one-third of the water would remain with MWD to cover the costs of MWD’s conveyance, storage and associated losses. This Environmental Assessment (EA) has been prepared to examine the potential direct, indirect and cumulative impacts to the affected environment associated with the Proposed Action and No Action Alternative.

No new or additional water would be diverted from the Delta as a result of the proposed exchange, nor would the timing of any Delta diversions be impacted in accordance with the commitments described in Section 2.2.2 of this document. Therefore, the only areas in which impacts may occur are the CVP service area boundaries of WWD and SLWD and the SWP service area boundary of MWD (see Figure 1-1). The water associated with the Proposed Action would be conveyed using existing facilities including the CVP and the SWP. The initial delivery would occur during the 2010 contract year, with the completion of return delivery occurring no later than September, 2011 or the expiration of the consolidated place-of-use petition, whichever is earlier; therefore, this will be the study period for evaluating the potential effects.

1.4 Reclamation’s Legal and Statutory Authorities and Jurisdiction Relevant to the Proposed Federal Action

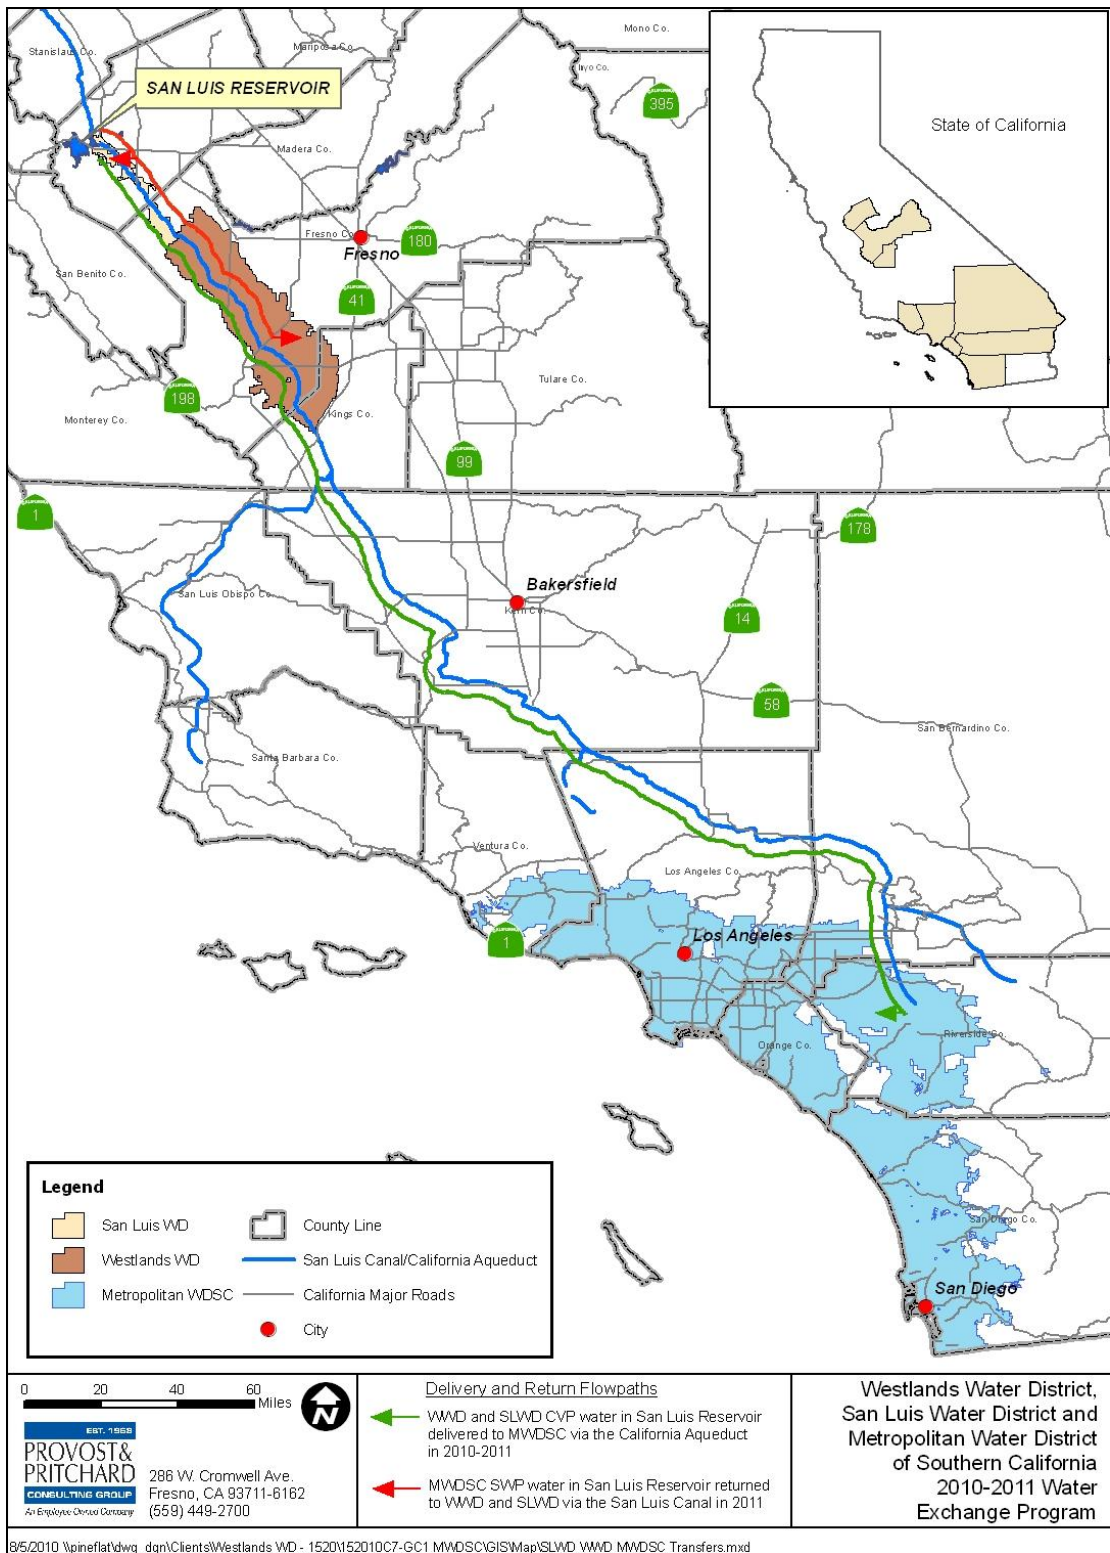

Several Federal laws, permits, licenses and policy requirements have directed, limited or guided the National Environmental Policy Act analysis and decision-making process of this EA and include the following as amended, updated, and/or superseded:

- Title XXXIV Central Valley Project Improvement Act (CVPIA), October 30, 1992, Section 3405(a);
- Reclamation Reform Act, October 12, 1982;
- Reclamation's Interim Guidelines for Implementation of Water Transfers under Title XXXIV of Public Law 102-575 (Water Transfer), February 25, 1993; and
- Reclamation and United States Fish and Wildlife Service (USFWS) Regional, Final Administrative Proposal on Water Transfers April 16, 1998.

1.5 Potential Issues

Potentially affected resources and cumulative impacts in the project vicinity include: water resources, land use, biological resources, cultural resources, Indian Trust Assets (ITA), socioeconomic resources, environmental justice, air quality, and global climate.

Figure 1-1 Project Location Map

THIS PAGE INTENTIONALLY LEFT BLANK

Section 2 Alternatives Including the Proposed Action

2.1 No Action Alternative

Under the No Action Alternative, Reclamation would not approve the delivery of CVP water from the Exchangers to MWD and the return of MWD's SWP water in 2011 to the Exchangers. The Exchangers' surplus supplies would remain in SLR storage, and depending on the fall hydrology, could be lost without beneficial use. MWD would continue to seek other sources of water to supplement its SWP supplies.

2.2 Proposed Action

Reclamation proposes to approve the exchange of up to 150,000 af of CVP water between the Exchangers and MWD. More specifically, Reclamation proposed to approve an exchange in which the Exchangers would deliver 150,000 af of CVP water to MWD. In exchange, MWD would deliver up to 100,000 af (two-thirds of total CVP water) of SWP Table A water to the Exchangers by September 30, 2011. Additionally, Reclamation proposes to approve the transfer of up to 50,000 af (one-third of the total CVP water) from the Exchangers to MWD.

2.2.1 WWD and SLWD Water Delivered to MWD

The 2010 CVP water would be conveyed under Article 55 of MWD's SWP contract with DWR through the California Aqueduct (Aqueduct). Article 55 of the SWP contracts allows for the SWP contractor to convey non-SWP water in the Aqueduct. Under this scenario, MWD would request DWR to convey the Exchangers' CVP water, if capacity exists, in the Aqueduct.

Under the Proposed Action, CVP water would be delivered outside of the CVP's permitted place-of-use if there is a risk of loss of the water from spill at the SLR. For 2009-2010, a petition was successfully filed and an order issued by the SWRCB consolidating the respective places-of-use of (CPOU) SWP and CVP. A similar order of consolidation has been filed for 2010-2011 with the SWRCB. Table 2-1 displays an example of Reclamation's approval of the potential breakdown of water sources which may not be all inclusive. The proposed action is contingent upon the SWRCB approving the proposed CPOU.

Table 2-1 Water Sources	Acre/Feet
Westlands WD 2010 Allocation Water	39,839 af
Westlands WD Transferred In Exchange Contractor Water	45,161 af
Westlands WD Transferred In Fresno ID Water	3,750 af
Westlands Transferred in City of Fresno Water	21,250 af
San Luis WD 2010 Allocation Water	38,125 af
San Luis WD Transferred In Exchange Contractor Water	1,875 af

MWDs final disposition or end use of the water is dependent on hydrological conditions. MWD has a variety of surface and groundwater storage programs available to them including but not limited to the following:

- MWD Service Area for Municipal and Industrial (M&I) direct delivery;
- Southern California surface storage including but not limited to Diamond Valley, Castaic, or Pyramid Reservoirs. Any surface storage would be part of MWDs existing programs in accordance with the associated environmental analysis and documentation;
- Central Valley groundwater storage including Arvin-Edison Water Storage District, Semitropic Water Storage District or Kern-Delta Water District. Any groundwater storage would be part of MWD's existing programs in accordance with the associated environmental analysis and documentation.

Water not directly delivered for M&I use would be stored as groundwater first in order to maintain surface water storage capacity which allows for a faster means of storage. How much water is delivered, where it is delivered to and when it is delivered would depend on fall hydrology, SWP operations and SLR end-of-year storage estimates.

MWD shall deliver the CVP water in accordance with applicable Federal Reclamation laws, policies, and guidelines. Water supplies would be used in compliance with the applicable state water rights permits including conforming to the applicable purpose and place-of-use of the associated water rights permit as may be temporarily amended.

2.2.2 MWD Water Returned to WWD and SLWD

In contract year 2011, MWD would subsequently deliver two-thirds of the amount of water received from the Exchangers from their SWP Table A supply to the O'Neill Forebay in 2011. One-third of the CVP water would remain with MWD as an approved transfer from the Exchangers.

The 2011 SWP water would be delivered to O'Neill Forebay and conveyed to WWD and SLWD through the San Luis Canal (SLC) or stored in SLR. Under this exchange mechanism, SWP water could be delivered outside of the SWP's permitted place-of-use. As previously noted, Reclamation approval is contingent upon the SWRCB order of consolidation.

The Proposed Action would include the following commitments:

- No native or untilld land (fallow for 3 consecutive years or more) would be cultivated with the water involved in these actions;
- No new construction or modification of existing facilities would be required;
- As noted in Section 2.2.1 and 2.2.2, a successful petition to consolidate the CVP and SWP places-of-use must be approved by the SWRCB in order to deliver the Exchanger's CVP water to MWD and to return MWD's SWP water to the Exchangers;
- All deliveries associated with the proposed exchanges involving CVP and SWP facilities would be required to be obtain the applicable approval/permission so as not to hinder the respective normal operations and maintenance of the facilities;

- All deliveries associated with the proposed exchanges involving CVP and SWP facilities would be required to be scheduled with Reclamation and DWR accordingly, so as not to hinder their respective obligations to deliver water to contractors, wildlife refuges, and due to regulatory requirements;
- All deliveries associated with the proposed exchanges involving CVP and SWP water cannot alter the flow regime of natural waterways or natural water bodies such as rivers, streams, creeks, ponds, pools, wetlands, etc., so as to not have a detrimental effect on fish or wildlife, or their habitats; and
- All deliveries associated with the proposed exchanges involving CVP and SWP water must comply with applicable federal, state and local laws, regulations, permits, guidelines and policies.

THIS PAGE INTENTIONALLY LEFT BLANK

Section 3 Affected Environment and Environmental Consequences

3.1 Water Resources

3.1.1 Affected Environment

Westlands Water District

WWD entered into a long-term contract with Reclamation in 1963 for 1,008,000 af per year (af/yr) of CVP water. In a stipulated agreement in 1981, the contractual entitlement to CVP water was increased to 1,150,000 af/yr. In 1999, WWD entered into an assignment contract with Reclamation for 6,260 af/yr of water from Mercy Springs Water District. Subsequently, WWD via its Distribution Districts 1 and 2, entered into an assignment contract with Reclamation for an additional 4,198 af/yr of water from Mercy Springs Water District. WWD has also entered into assignment contracts for 27,000 af/yr from Broadview Water District, 2,500 af/yr from Centinella Water District, and 2,990 af/yr from Widren Water District. Reclamation signed an interim renewal contract with WWD effective from March 1, 2010 thru February 28, 2012. It is anticipated that this interim renewal contract would be renewed prior to its termination in 2012.

The 10-year average allocation of south-of-Delta CVP water supplies available to the Exchangers between 2001 and 2010 are summarized in Table 3-1 below. The table lists maximum delivery percentages of CVP water on a yearly basis for agriculture purposes, and shows that the 10-year average is 59.4 percent of contract amounts, with the last four years averaging only some 36.5 percent of contract amounts.

Table 3-1 Historic south-of-Delta CVP Allocations (as Percentage Amount of Contract)	
Contract Year	Allocation (percent)
2001-2002	49
2002-2003	70
2003-2004	75
2004-2005	70
2005-2006	85
2006-2007	100
2007-2008	50
2008-2009	40
2009-2010	10
2010-2011	45
Average	59.4

WWD often participates in water transfer arrangements with other water districts in order to supplement their CVP water supply. In past years, the WWD has actively received transferred water from many contractors within as well as outside the CVP; these transfers are summarized in Table 3-2. The table lists transfers into WWD by year, and shows that from 2006 to 2009, WWD has transferred an average of over 138,000 af into the district to supplement its other supplies.

Table 3-2 Summary of Net Transfers into WWD.						
Water Type	2006-2007	2007-2008	2008-2009	2009-2010	2006-2009 Average	2010-2011
Central Valley Project	63,654	104,838	120,782	88,445	94,430	128,808
State Water Project	9,000	26,359	15,974	12,523	15,964	3,100
Cross Valley Contractors	-	17,823	14,600	-	8,106	10,150
Other	6,762	-	36,400	37,251	20,103	97,924
Total	79,416	149,020	187,756	138,219	138,603	239,982

The table also shows the effects of the 2010-2011 initial CVP allocation of 5 percent of contract amounts. In anticipation of a fourth consecutive dry year, WWD reacted to this low allocation by transferring over 101,000 af more into the district than the previous four-year average. With the allocation ultimately increased to 45 percent, this additional water has resulted in 2010 contract supplies surplus to WWD's current needs.

San Luis Water District

SLWD entered into a long-term water service contract with Reclamation in 1959, and into a subsequent amendatory contract in 1974, for 125,080 af/yr of CVP water. Recently, due to the expiration of their original long-term contract, SLWD signed an interim renewal contract, effective January 1, 2009, with a term of up to 26 months. It is anticipated that this interim renewal contract would be renewed prior to its termination in 2011.

Like WWD, SLWD also participates in water transfer arrangements with other water districts in order to supplement their CVP water supply. In past years, the district has actively received transferred water from many contractors within as well as outside the CVP; these transfers are summarized in Table 3-3. The table lists transfers into SLWD by year, and shows that from 2006 to 2009, SLWD has transferred an average of over 28,000 af into the district to supplement its other supplies.

Table 3-3 Summary of Net Transfers into SLWD.						
Water Type	2006-2007	2007-2008	2008-2009	2009-2010	2006-2009 Average	2010-2011
Central Valley Project	9,363	25,748	33,458	20,140	22,177	18,335
State Water Project	-	-	-	-	-	-
Cross Valley Contractors	-	3,500	-	-	875	-
Other	-	-	7,809	13,904	5,428	12,792
Total	9,363	29,248	41,267	34,044	28,481	31,127

As is the case with WWD, when the allocation ultimately increased to 45 percent, this additional water resulted in 2010 contract supplies surplus to SLWD's current year needs.

Metropolitan Water District of Southern California

MWD was created in 1928 under an enabling act of the California State Legislature to provide supplemental water to cities and counties in the Southern California coastal plain. This supplemental water is delivered to MWD's twenty six member agencies through a regional network of canals, pipelines, reservoirs, treatment plants and related facilities.

In the late 1990's, MWD developed an Integrated Resources Plan (IRP) which predicted significant water supply deficits for its service area and also outlined the efforts needed on several fronts to avoid significant water shortages, especially in dry years. This plan called for a

mix of water resources derived from conservation, reclamation, groundwater conjunctive-use and water transfers to ensure adequate system flexibility to protect public safety, particularly during droughts. The IRP specifically cites a need for diversification of MWD's source of supply including accessing transfers, exchanges and groundwater banking programs involving Central Valley water districts.

MWD imports water from the Colorado River via the Colorado River Aqueduct and from Northern California across the Sacramento-San Joaquin Delta (Delta) via the SWP. MWD also has access to reservoirs and groundwater basins that can store as reserves more than twice the water that MWD delivers to its member agencies in a typical year. By keeping the storage reserves maximized, MWD can maintain a hedge against an outage from any of its major water sources. Prior to 2007, favorable weather and environmental conditions allowed MWD to store more than a full year's supply of deliveries in these facilities. The capacity of this storage network is several million acre-feet of water, and this storage allows MWD to be able to ensure a certain level of water supply reliability.

Beginning in 2007, dry weather in the West and restrictions in the Delta have resulted in MWD having to draw from their storage reserves. As a result, these reserves have been reduced to critical levels, and the district is actively seeking additional water supplies to replenish their reserve supply.

The 10-year average allocations of SWP water supplies available to MWD between 2001 and 2010 are summarized in Table 3-4 below. The table lists maximum delivery percentages of SWP water on a yearly basis, and shows that the 10-year average is 63.9 percent of contract amounts, with the last four years averaging 46.3 percent of contract amounts.

Table 3-4 Historic SWP Allocations (as Percentage Amount of Contract)	
Contract Year	Allocation (percent)
2001	39
2002	70
2003	90
2004	65
2005	90
2006	100
2007	60
2008	35
2009	40
2010	50
Average	63.9

The annual Table A contract amount for MWD is 1,911,500 af, thus the average SWP supply to MWD has been 1,221,449 af. With a 2010 allocation of 50 percent (955,750 af), MWD is 265,699 af below the average supply levels (cumulatively, a shortfall of 1,349,521 af below the typical supply levels over the previous four years).

MWD also participates in water transfer arrangements with other contractors in order to supplement their water supply. In response to the last four below-normal water years, the district has actively received transferred water from many contractors within as well as outside the SWP—these transfers are summarized in Table 3-5. The table lists transfers into MWD by year,

and shows that from 2008 to 2009, MWD has transferred an average of over 70,000 af into the district to supplement its other supplies.

Table 3-5 Summary of Net Transfers into MWD.						
	2006	2007	2008	2009	2008-2009 Average	2010
Dought Water Bank	-	-	-	37,912	18,956	-
Yuba River Accord	-	-	26,430	42,915	34,673	60,000
State Water Project	-	-	31,952	-	15,976	91,242
Other	-	-	-	-	-	18,145
Total	-	-	58,382	80,827	69,605	169,387

The table also illustrates the cumulative effects of four consecutive below-normal water years. In an effort to replenish its reserve storage above critical levels, MWD reacted to the reduced water allocations by transferring over 100,000 af more into the District than the previous two-year average. With up to 150,000 af of additional water from the Proposed Action, MWD will further bolster their storage reserves for the coming year.

3.1.2 Environmental Consequences

3.1.2.1 No Action Alternative

Under the No Action Alternative, Reclamation would not approve the proposed exchange and transfer program. The Exchangers would retain their CVP supplies and use them as allowed under their respective contracts. Any water remaining undelivered at the end of the water year would be at risk of spill and loss.

Likewise, MWD would continue to seek other sources of water to replenish their depleted reserves stored, increasing pressure on water markets and potentially increasing Delta exports.

3.1.2.2 Proposed Action

Under the Proposed Action, the Exchangers would exchange a portion of their surplus 2010-11 water supplies for an assured two-thirds supply being available to them for 2011-2012 delivery. Likewise, MWD would utilize the one-third CVP water supply transferred to them from WWD and SLWD to replenish their depleted reserves.

The Exchangers have water available that is surplus to their current contract year 2010 operational needs, and would benefit by sending this surplus water to MWD for their in-district use next contract year. MWD currently has storage capacity available, and it would benefit by being able to move and store up to an additional 150,000 af of water in their facilities.

The CVP and SWP facilities would not be impacted as the Proposed Action must be scheduled and approved by Reclamation and DWR. Additionally, the transfer and exchange must be conducted in a manner that would not harm other CVP contractors or other CVP contractual or environmental obligations, or SWP contractors consistent with the conditions noted above in Section 2.2. Therefore, it is anticipated that there would be no impact to normal operations of the facilities.

Although MWD would receive a net increase of up to one-third of the total amount of WWD and SLWD CVP water delivered to them in 2010, this would only occur because this water is surplus

to the Exchangers' current year water needs and the delivery to MWD would be only possible if Article 55 conveyance capacity is available in the California Aqueduct. The conveyance of the WWD and SLWD CVP water under Article 55 is subject to capacity in the Aqueduct and meeting all SWP requirements. The WWD and SLWD CVP water would be delivered for storage in existing MWD facilities and ultimately used for existing M&I uses. The exchange would enhance the water resources available to both Exchangers and MWD without increasing Delta exports.

Central Valley groundwater storage involving Arvin-Edison Water Storage District, Semitropic Water Storage District or Kern-Delta Water District may occur. The operation of these banking programs was analyzed as a condition of their construction, and any additional banking operations associated with this project would be conducted under the same operational regulation that govern other banking operations.

3.2 Land Use

3.2.1 Affected Environment

WWD covers almost 950 square miles of farmland between the California Coast Range and the trough of the San Joaquin Valley (SJV) in western Fresno and Kings Counties. Currently, WWD's boundaries encompass roughly 604,000 acres with an irrigable acreage of 570,000 with over 60 different crops are grown commercially.

SLWD is located on the western side of the SJV near the City of Los Banos, in both Merced and Fresno Counties. Construction of the DMC in the 1950s sparked major development of farmland in the SJV that led to the formation of SLWD in January 1951. SLWD's current size is approximately 66,000 acres. The majority of irrigated acreage is planted in permanent crops.

MWD's service area encompasses about 5,200 square miles in Los Angeles, Orange, San Diego, Riverside, San Bernardino, and Ventura counties. Only 10 percent of the region is urbanized, the remainder is largely uninhabited mountain and desert area. The area is home to approximately 19 million people with the expectation to reach a population of 22 million people by the year 2015.

3.2.2 Environmental Consequences

3.2.2.1 No Action

Under the No Action Alternative, Reclamation would not approve the proposed exchange and transfer program. Because this water is surplus to the current year needs, landowners in the Exchangers' service areas would continue to finish out their 2010 crops, and no land use changes would be anticipated this year. Should the Exchangers attempt to reschedule the water for use in contract year 2011, there is the possibility that this water would be "spilled" and increased land fallowing could occur in 2011.

No land use changes are anticipated in MWD under the No Action Alternative, as this water was to be used to replenish storage reserves, and not as a new water supply that could facilitate growth.

3.2.2.2 Proposed Action

Under the Proposed Action, there would be no land use changes within the Exchangers' service areas in 2010 as their water supplies would not be reduced below anticipated demands. There could be a positive impact on agricultural land use within the Exchangers' service areas compared to the No Action Alternative due to the ability of the landowners to make planting decisions for 2011 with the knowledge that up to 100,000 af would or could be returned to them in addition to their allocated 2011-2012 CVP supply.

Although MWD would receive an increase of up to 150,000 af of water this year, this would occur in a year when this water is surplus to the Exchangers and only when the State and Federal exchange and transfer requirements are met. The conveyance of water under Article 55 is subject to capacity in the Aqueduct and meeting all SWP requirements. Due to the unique availability of this water, the Proposed Action would not lead to long-term land use changes. The water supplies are surplus to the Exchangers and do not provide a reliable or consistent amount that could be considered growth inducing in MWD. The WWD and SLWD water would be delivered to storage in existing MWD facilities and ultimately used for MWD's existing M&I uses. However, because no new long term supply is involved, the exchange and transfer would not facilitate growth.

3.3 Biological Resources

3.3.1 Affected Environment

Of the approximately 5.6 million acres of Valley grasslands and San Joaquin saltbrush scrub (the primary natural habitats across the Valley), less than 10 percent remains today. Much of the remaining habitat consists of isolated fragments supporting small, highly vulnerable populations (Reclamation 2001). The Exchangers' service areas are dominated by agricultural habitat that includes field crops, orchards, and pasture. The vegetation is primarily crops and frequently includes weedy non-native annual and biennial plants.

Urban development resulted in large losses of habitat in the south coast area. Major habitat types in this region include coastal sage scrub, chaparral, oak woodland, riparian habitat and freshwater wetlands, coastal sand dunes, and coastal salt marsh. Other habitat types include grasslands (once dominated by needlegrass) and vernal pools. By 1990, less than 50% of historical cover by chaparral remained, less than 40% cover by oak woodland, and less than five percent by coastal sage scrub, riparian habitat and freshwater wetlands, coastal sand dunes, and coastal salt marsh.

The documents incorporated by reference contain a more detailed description of biological resources in the Exchangers service areas and boundaries. The Exchangers have already undergone consultation with the USFWS and National Marine Fisheries Service (NMFS) in regard to their renewal contracts and are implementing measures in the applicable Biological Opinions supporting those contracts.

Threatened, Endangered and Sensitive Species

Reclamation requested an official species list from USFWS via the Sacramento Field Office's website: http://www.fws.gov/sacramento/es/spp_list.htm, on August 2, 2010 for the following

United States Geological Survey 7.5 minute quadrangles covering WWD (Document Number 100802041949): Avenal, Broadview Farms, Burrel, Calflax, Cantua Creek, Chaney Ranch, Chounet Ranch, Coalinga, Coit Ranch, Domengine Ranch, Firebaugh, Five Points, Gujarral Hills, Hammonds Ranch, Harris Ranch, Helm, Huron, Kettleman City, La Cima, Lemoore, Levis, Lillis Ranch, Monocline Ridge, San Joaquin, Stratford, Tranquillity, Tres Pecos Farms, Tumey Hills, Vanguard, Westhaven and Westside (Table 3-6).

In addition, the database was accessed and summarized in Table 3-6 for the following quadrangles covering SLWD (Document Number 100802040356): Charleston School, Chounet Ranch, Dos Palos, Hammonds Ranch, Laguna Seca Ranch, Los Banos, Los Banos Valley, Ortigalita Peak NW, San Luis Dam and Volta.

Table 3-6 Potential Federal Status Species WWD and SLWD				
Common Name	Species Name	Fed Status ¹	ESA ²	Summary
Invertebrates				
longhorn fairy shrimp	<i>Branchinecta longiantenna</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
vernal pool fairy shrimp	<i>Branchinecta lynchi</i>	T	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
valley elderberry longhorn beetle	<i>Desmocerus californicus dimorphus</i>	T	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
vernal pool tadpole shrimp	<i>Lepidurus packardii</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Fish				
delta smelt	<i>Hypomesus transpacificus</i>	T	NE	No changes in Delta pumping.
Central Valley steelhead	<i>Oncorhynchus mykiss</i>	T	NE	No effect on natural stream systems.
Amphibians				
California tiger salamander, central population	<i>Ambystoma californiense</i>	T	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Critical habitat, CA tiger salamander, central population	<i>Ambystoma californiense</i>	X	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
California red-legged frog	<i>Rana draytonii</i>	T	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Critical habitat, CA red-legged frog	<i>Rana draytonii</i>	X	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Reptiles				
blunt-nosed leopard lizard	<i>Gambelia (=Crotaphytus) sila</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
giant garter snake	<i>Thamnophis gigas</i>	T	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Birds				
California condor	<i>Gymnogyps californianus</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.

Table 3-6 (Continued) Potential Federal Status Species WWD and SLWD

Mammals				
giant kangaroo rat	<i>Dipodomys ingens</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Fresno kangaroo rat	<i>Dipodomys nitratooides exilis</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Critical habitat, Fresno kangaroo rat	<i>Dipodomys nitratooides exilis</i>	X	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Tipton kangaroo rat	<i>Dipodomys nitratooides nitratooides</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
San Joaquin kit fox	<i>Vulpes macrotis mutica</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Plants				
California jewelflower	<i>Caulanthus californicus</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
Palmate-bracted bird's-beak	<i>Cordylanthus palmatus</i>	E	NE	No land use changes would occur as a result of this action, no conversion of habitat, and no new facilities.
San Joaquin woolly-threads	<i>Monolopia congdonii</i> (= <i>Lembertia congdonii</i>)	E	NE	No land use changes would occur as a result of this action. No conversion of habitat, and no new facilities.

¹Listed as Federally Endangered (E), Threatened (T) or Critical Habitat designated (X)

²No Effect Determination

While quadrangle level detail was not readily available for the MWD service area, the websites for the Carlsbad http://www.fws.gov/carlsbad/TEspecies/CFWO_Species_List.htm and the Ventura <http://www.fws.gov/ventura/endangered/consultations/> Fish & Wildlife offices were accessed on August 6, 2010 for the following counties and summarized in Table 3-7: Los Angeles, Orange, San Bernardino, Riverside, San Diego and Ventura. The database information is also included in Appendix A.

Status: E = Federally endangered; T = Federally threatened; C = Federal candidate for listing; P = proposed;

PDM=subject to post delisting monitoring

XN: Experimental population; * southern sea otter first listed as threatened Jan. 14, 1977 42:2968

CH = Critical Habitat: p = Proposed; f = Designated; np=Not Prudent; pr = Proposed Revised; fr = Final Revised; W* = proposal withdrawn

RP = Recovery Plan: F= Final, D= Draft

County Reported: LA = Los Angeles; O = Orange; SB = San Bernardino; Riv = Riverside; SD = San Diego

Note: Santa Catalina Isl. and San Clemente Isl. Are in L.A. County

3.3.2 Environmental Consequences

3.3.2.1 No Action

Under the No Action Alternative, it is anticipated that, in response to not having up to 100,000 af of supplemental water available in contract year 2011 and a potentially low initial allocation, there would be continued, and in some cases, additional land fallowing within the Exchangers' service areas in 2011. The effects of continued land fallowing on listed species is anticipated to be negligible, as most of the habitat types required by species protected by the Endangered Species Act (ESA) do not occur in the action area. As this water was only to be used to bolster storage reserves, no biological resources are anticipated to be affected.

3.3.2.2 Proposed Action

The effects are similar to the No Action Alternative. Most of the habitat types required by species protected by the ESA do not occur in the Proposed Action area. The Proposed Action would not involve the conversion of any land fallowed and untilled for three or more years or any new development. While the Proposed Action could reduce the potential for fallowed acreage, it would not substantially change the land use patterns of the cultivated or fallowed fields that may have some value to listed species or to birds protected by the Migratory Bird Treaty Act (MBTA). Since no natural stream courses would be utilized as part of the Proposed Action, there would be no effects on listed fish species. No changes in Delta exports or operations would occur, so no impacts on species utilizing the Delta would occur.

The aspect of the Proposed Action that is of possible concern, environmentally, is the unbalanced nature of the program (e.g. for every 3 af delivered to MWD; 2 af would be returned to WWD and SLWD and 1 af would be transferred to MWD. However, the net amount of transferred water that would remain in MWD would be utilized to replenish depleted storage reserves. The 150,000 af of water that would be involved in the exchange and transfer program are supplies already allocated to the Exchangers and no additional water supplies would be diverted from rivers or lakes. No new construction or points of diversions would be required. However, slight changes in timing and locations of when and where water is diverted and stored south of the Delta could occur, and there may be small changes in water levels within MWD. These reservoir level changes would be within normal operating levels, as the reservoirs are below capacity due to drought conditions. These changes would not impact any federally listed or proposed species or critical habitat.

The relatively small amounts of water associated with the Proposed Action (when compared to the total amounts of water supply delivered) and the requirement that no native lands be converted without consultation with USFWS would preclude impacts to wildlife, including federally listed species. Habitat for listed species is mostly absent in the vast agricultural areas where small declines in fallowed ground may occur, and listed species would not be affected by these small short term changes in the vast agricultural area.

3.4 Cultural Resources

Cultural resources is a broad term that includes prehistoric, historic, architectural, and traditional cultural properties. The National Historic Preservation Act (NHPA) of 1966 is the primary Federal legislation that outlines the Federal Government's responsibility to cultural resources.

Section 106 of the NHPA requires the Federal Government to take into consideration the effects of an undertaking on cultural resources listed on or eligible for inclusion in the National Register of Historic Places (NRHP). Those resources that are on or eligible for inclusion in the NRHP are referred to as historic properties.

The Section 106 process is outlined in the Federal regulations at 36 Code of Federal Regulations (CFR) Part 800. These regulations describe the process that the Federal agency (Reclamation) takes to identify cultural resources and the level of effect that the proposed undertaking will have on historic properties. In summary, Reclamation must first determine if the action is the type of action that has the potential to affect historic properties. If the action is the type of action to affect historic properties, Reclamation must identify the area of potential effects (APE), determine if historic properties are present within that APE, determine the effect that the undertaking will have on historic properties, and consult with the State Historic Preservation Office (SHPO), to seek concurrence on Reclamation's findings. In addition, Reclamation is required through the Section 106 process to consult with Indian Tribes concerning the identification of sites of religious or cultural significance, and consult with individuals or groups who are entitled to be consulting parties or have requested to be consulting parties.

3.4.1 Affected Environment

Resources within the scope of this project include historic features of the built environment primarily those of the CVP and SWP. Components of the CVP have been determined eligible for inclusion in the NRHP and have been prepared for inclusion in the NRHP through a multiple property nomination. The CVP multiple property nomination is currently being reviewed for submission to the Keeper of the NRHP for inclusion in the NRHP.

The DMC is a component of the CVP that is currently being evaluated for the NRHP. The DMC, completed in 1951, carries water southeasterly from the Tracy Pumping Plant along the west side of the San Joaquin Valley for irrigation supply, for use in the San Luis Unit, and to replace San Joaquin River water stored at Friant Dam and used in the Friant-Kern and Madera systems.

The San Luis Unit is a joint Federal and State project. The Federal components of the San Luis Unit include SLR, O'Neill Pumping Plant and Intake Canal, Coalinga Canal, Pleasant Valley Pumping Plant, and the San Luis Drain. The features of the San Luis Unit are not considered contributing features of the CVP's NRHP status. Additionally, the features of the San Luis Unit were all completed in the late 1960's and are not yet eligible for inclusion in the NRHP.

3.4.2 Environmental Consequences

3.4.2.1 No Action

Under the No Action Alternative, Reclamation would not approve the water exchange and transfer program and there would be no Federal undertaking. Conditions related to cultural resources would remain the same as existing conditions. There would be no impacts to cultural resources under the No Action alternative.

3.4.2.2 Proposed Action

The exchange and transfer of CVP water as described in the Proposed Action is an undertaking as described in Section 301(7) of the NHPA, initiating Section 106 of the NHPA and its

implementing regulations at 36 CFR Part 800. All exchanges and transfers would occur through existing facilities and water would be provided within existing service area boundaries to areas that currently use CVP and SWP water. The Proposed Action would not result in modification of any existing facilities, construction of new facilities, change in land use, or growth. Since Reclamation determined that the Proposed Action is the type of activity that has no potential to affect to historic properties pursuant to the regulations at 36 CFR Part 800.3(a)(1), no cultural resources would be impacted as a result of implementing the Proposed Action (see Appendix B for cultural resources determination).

3.5 Indian Trust Assets

3.5.1 Affected Environment

ITA are legal interests in assets that are held in trust by the U.S. Government for federally recognized Indian tribes or individuals. The trust relationship usually stems from a treaty, executive order, or act of Congress. The Secretary of the Interior is the trustee for the United States on behalf of federally recognized Indian tribes. “Assets” are anything owned that holds monetary value. “Legal interests” means there is a property interest for which there is a legal remedy, such a compensation or injunction, if there is improper interference. ITA cannot be sold, leased or otherwise alienated without the United States’ approval. Assets can be real property, physical assets, or intangible property rights, such as a lease, or right to use something; which may include lands, minerals and natural resources in addition to hunting, fishing, and water rights. Indian reservations, rancherias, and public domain allotments are examples of lands that are often considered trust assets. In some cases, ITA may be located off trust land. Reclamation shares the Indian trust responsibility with all other agencies of the Executive Branch to protect and maintain ITA reserved by or granted to Indian tribes, or Indian individuals by treaty, statute, or Executive Order.

3.5.2 Environmental Consequences

3.5.2.1 No Action

The No Action Alternative is similar to the Proposed Action. Historical diversions and water deliveries would continue as in the past. Therefore no impacts to ITA would occur.

3.5.2.2 Proposed Action

Approval of the exchange and transfer program between the Exchangers and MWD would not involve any construction on lands or impact water, hunting, and fishing rights associated with the nearest Public Domain Allotment. Therefore, the Proposed Action does not have a potential to affect ITA (determination can be found in Appendix B).

3.6 Socioeconomic Resources

3.6.1 Affected Environment

The agricultural industry significantly contributes to the overall economic stability of the San Joaquin Valley. The CVP allocations each year allow farmers to plan for the types of crops to grow and to secure loans to purchase supplies. Depending upon the variable hydrological and economical conditions, water transfers and exchanges could be prompted. The economic

variances may include fluctuating agricultural prices, insect infestation, changing hydrologic conditions, increased fuel and power costs.

3.6.2 Environmental Consequences

3.6.2.1 No Action

Under the No Action Alternative, economic conditions in the vicinity of the Exchangers could worsen. As agricultural land continues to be taken out of production as a result of the uncertainty associated with low initial allocations and unknown supplemental supplies, there would be a decreasing need for farm labor, and farm equipment and supplies. The economic impacts of reduced agricultural production could adversely impact the affected environment.

3.6.2.2 Proposed Action

The Proposed Action would allow the Exchangers to convert water that is surplus to their current year operational needs into a supply that could be utilized next contract year to supplement their 2011 CVP allocations. This would help maintain the stability of the agricultural market and economic vitality for the San Joaquin Valley to a certain degree. The exchange is a temporary action and would provide short-term beneficial impacts to socioeconomic conditions in the affected region.

Likewise, MWD currently has available storage capacity, and it would benefit by being able to move and store up to an additional 150,000 af of water in their surface and/or groundwater facilities which would result in additional space being available in the State share of SLR for 2011.

3.7 Environmental Justice

3.7.1 Affected Environment

The February 11, 1994, Executive Order 12898 requires federal agencies to ensure that their actions do not disproportionately impact minority and disadvantaged populations. The market for seasonal workers on local farms draws thousands of migrant workers, commonly of Hispanic origin from Mexico and Central America, into the San Joaquin Valley. Agriculture and related businesses are the main industry in the Recipient Districts, which provides employment opportunities for these minority and/or disadvantaged populations.

3.7.2 Environmental Consequences

3.7.2.1 No Action

The No Action Alternative could result in harm to minority or disadvantaged populations within the vicinity of the Exchangers service areas because lands could be temporarily or perennially taken out of agricultural production, resulting in reduced need for farm labor.

3.7.2.2 Proposed Action

The Proposed Action could reduce dislocation and promote continued employment within the affected environment. The Proposed Action would not disproportionately impact economically disadvantaged or minority populations. Employment opportunities for low-income wage earners and minority population groups would be within historical conditions.

3.8 Air Quality

3.8.1 Affected Environment

The Proposed Action area is located within both the San Joaquin Valley Air Basin (SJVAB) and the South Coast Air Basin (SCAB). Both air basins are federal and state designated air basins and the SJVAB is under the jurisdiction of the San Joaquin Valley Air Pollution Control District while the SCAB is under the jurisdiction of the South Coast Air Quality Management District. Both jurisdictions adopt and enforce rules and regulations to achieve State and federal ambient air quality standards and enforce applicable State and federal laws.

3.8.2 Environmental Consequences

3.8.2.1 No Action

Under the No Action Alternative, there would be no impacts to air quality since conditions would remain the same as the existing conditions.

3.8.2.2 Proposed Action

Under the Proposed Action, movement of water between Exchangers and MWD would be done via gravity flow and/or pumped using electric motors which have no emissions. The air quality emissions from electrical power have been considered in environmental documentation for the generating power plant. There are no emissions from electrical motors and therefore a conformity analysis is not required under the CAA and there would be no impact on air quality.

3.9 Global Climate

3.9.1 Affected Environment

Climate change refers to significant change in measures of climate that last for decades or longer. Burning of fossil fuels is considered a major contributor to perceived global climate change. Carbon dioxide, which is produced when fossil fuels are burned, is a greenhouse gas (GHG) that effectively traps heat in the lower atmosphere. Some carbon dioxide is liberated naturally, but this may be augmented greatly through human activities.

Human activity has substantially added to the amount of carbon dioxide in the atmosphere, primarily through burning of fossil fuels. This action enhances the natural greenhouse effect, and is likely contributing to an increase in global average temperature and related climate changes. The magnitude and significance of anthropogenic effects is being examined and debated and there is uncertainty associated with the science of climate change (EPA 2009).

More than 20 million Californians rely on the SWP and CVP. Increases in air temperature may lead to changes in precipitation patterns, runoff timing and volume, sea level rise, and changes in the amount of irrigation water needed due to modified evapotranspiration rates. These changes may lead to impacts to California's water resources and project operations.

While there is general consensus in their trend, the magnitudes and onset-timing of impacts are uncertain and are scenario-dependent (Anderson et al. 2008).

California Assembly Bill 32, the Global Warming Solutions Act of 2006, mandates the reduction of GHG emissions in California to 1990 levels by the year 2020. Currently there are no established significance thresholds for GHG in the SJVAB or in California.

3.9.2 Environmental Consequences

3.9.2.1 No Action Alternative

Implementation of the No Action Alternative would involve no change on the composition of GHG in the atmosphere and therefore would not contribute to global climate change.

3.9.2.2 Proposed Action

The emissions from the generating power plant to provide the electricity needed to convey up to 50,000 af of water are small when compared to the overall water supplies and power used each year to move water where it is needed. GHG generated by the project is expected to be small compared to other sources contributing to potential climate change, and while any increase in GHG emissions would add to the global inventory of gases that would contribute to global climate change, the Proposed Action would result in potentially minimal increases in GHG emissions and a net increase in GHG emissions among the pool of GHG would not be detectable.

3.10 Cumulative Impacts

The Proposed Action was found to have no adverse impacts on water, biological, and cultural resources, ITA and environmental justice. The Proposed Action is a one-time, temporary action, and when added to other actions do not contribute to cumulative adverse impacts to existing environmental conditions. Slight beneficial impacts to land use and socioeconomics would be short-term and within historical variations, and would not contribute to cumulative impacts.

Coordination to schedule the deliveries for all these actions would be required with the appropriate overseeing agency to ensure that the normal operations of the facilities involved would not be hindered. Overall, there would be no cumulative impacts from the Proposed Action.

THIS PAGE INTENTIONALLY LEFT BLANK

Section 4 Consultation and Coordination

4.1 Public Review Period

Reclamation is providing the public with an opportunity to comment on the Draft Finding of No Significant Impact and Draft EA from September 15, 2010 through September 30, 2010.

4.2 Fish and Wildlife Coordination Act (16 USC § 661 et seq.)

The Fish and Wildlife Coordination Act (FWCA) requires that Reclamation consult with fish and wildlife agencies (federal and state) on all water development projects that could affect biological resources. The Proposed Action does not involve federal water development projects; therefore, the FWCA does not apply.

4.3 Endangered Species Act (16 USC § 1531 et seq.)

Section 7 of the ESA requires Federal agencies, in consultation with the Secretary of the Interior, to ensure that their actions do not jeopardize the continued existence of endangered or threatened species, or result in the destruction or adverse modification of the critical habitat of these species.

The Proposed Action would not change the land use patterns of the cultivated or fallowed fields that do have some value to listed species. In addition, the requirement that no native lands be converted without consultation with the USFWS, and the stringent requirements for transfers and exchanges under applicable laws would prevent any adverse impact to any federally listed species or any critical habitat. Therefore, consultation with the USFWS or NMFS is not required. The Sacramento, Ventura, and Carlsbad Field Offices will be sent a copy of this EA and associated FONSI when they are released for public review. National Historic Preservation Act (16 USC § 470 et seq.)

4.4 National Historic Preservation Act (16 USC § 470 et seq.)

The NHPA of 1966, as amended (16 USC 470 *et seq.*), requires that federal agencies give the Advisory Council on Historic Preservation an opportunity to comment on the effects of an undertaking on historic properties, properties that are eligible for inclusion in the NRHP. The 36 CFR Part 800 regulations implement Section 106 of the NHPA.

Section 106 of the NHPA requires federal agencies to consider the effects of federal undertakings on historic properties, properties determined eligible for inclusion in the NRHP. Compliance with Section 106 follows a series of steps that are designed to identify interested parties, determine the APE, conduct cultural resource inventories, determine if historic properties are present within the APE, and assess effects on any identified historic properties. The activities associated with the Proposed Action would include no new ground disturbance, no change in land use, and the use of existing conveyance features to move and store water. Reclamation has determined that there would be no potential to affect historic properties by the Proposed Action pursuant to 36 CFR 800.3(a)(1), and consultation with the SHPO is not required (see Appendix B for determination).

4.5 Migratory Bird Treaty Act (16 USC § 703 et seq.)

The MBTA implements various treaties and conventions between the U.S. and Canada, Japan, Mexico and the former Soviet Union for the protection of migratory birds. Unless permitted by regulations, the MBTA provides that it is unlawful to pursue, hunt, take, capture or kill; attempt to take, capture or kill; possess, offer to or sell, barter, purchase, deliver or cause to be shipped, exported, imported, transported, carried or received any migratory bird, part, nest, egg or product, manufactured or not. Subject to limitations in the MBTA, the Secretary of the Interior may adopt regulations determining the extent to which, if at all, hunting, taking, capturing, killing, possessing, selling, purchasing, shipping, transporting or exporting of any migratory bird, part, nest or egg will be allowed, having regard for temperature zones, distribution, abundance, economic value, breeding habits and migratory flight patterns.

The Proposed Action would not change the land use patterns of the cultivated or fallowed fields that do have some value birds protected by the MBTA; therefore, the Proposed Action would have no effect on birds protected by the MBTA.

County Lists

No county species lists requested.

Key:

- (E) *Endangered* - Listed as being in danger of extinction.
- (T) *Threatened* - Listed as likely to become endangered within the foreseeable future.
- (P) *Proposed* - Officially proposed in the Federal Register for listing as endangered or threatened.
- (NMFS) Species under the Jurisdiction of the [National Oceanic & Atmospheric Administration Fisheries Service](#). Consult with them directly about these species.
- Critical Habitat* - Area essential to the conservation of a species.
- (PX) *Proposed Critical Habitat* - The species is already listed. Critical habitat is being proposed for it.
- (C) *Candidate* - Candidate to become a proposed species.
- (V) Vacated by a court order. Not currently in effect. Being reviewed by the Service.
- (X) *Critical Habitat* designated for this species

Important Information About Your Species List

How We Make Species Lists

We store information about endangered and threatened species lists by U.S. Geological Survey 7½ minute quads. The United States is divided into these quads, which are about the size of San Francisco.

The animals on your species list are ones that occur within, **or may be affected by** projects within, the quads covered by the list.

- Fish and other aquatic species appear on your list if they are in the same watershed as your quad or if water use in your quad might affect them.
- Amphibians will be on the list for a quad or county if pesticides applied in that area may be carried to their habitat by air currents.
- Birds are shown regardless of whether they are resident or migratory. Relevant birds on the county list should be considered regardless of whether they appear on a quad list.

Plants

Any plants on your list are ones that have actually been observed in the area covered by the list. Plants may exist in an area without ever having been detected there. You can find out what's in the surrounding quads through the California Native Plant Society's online [Inventory of Rare and Endangered Plants](#).

Surveying

Some of the species on your list may not be affected by your project. A trained biologist and/or botanist, familiar with the habitat requirements of the species on your list, should determine whether they or habitats suitable for them may be affected by your project. We recommend that your surveys include any proposed and candidate species on your list. See our [Protocol](#) and [Recovery Permits](#) pages.

For plant surveys, we recommend using the [Guidelines for Conducting and Reporting Botanical Inventories](#). The results of your surveys should be published in any environmental documents prepared for your project.

Your Responsibilities Under the Endangered Species Act

All animals identified as listed above are fully protected under the Endangered Species Act of 1973, as amended. Section 9 of the Act and its implementing regulations prohibit the take of a federally listed wildlife species. Take is defined by the Act as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect" any such animal.

Take may include significant habitat modification or degradation where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding, or shelter (50 CFR §17.3).

Take incidental to an otherwise lawful activity may be authorized by one of two procedures:

- If a Federal agency is involved with the permitting, funding, or carrying out of a project that may result in take, then that agency must engage in a formal [consultation](#) with the Service.

During formal consultation, the Federal agency, the applicant and the Service work together to avoid or minimize the impact on listed species and their habitat. Such consultation would result in a biological opinion by the Service addressing the anticipated effect of the project on listed and proposed species. The opinion may authorize a limited level of incidental take.

- If no Federal agency is involved with the project, and federally listed species may be taken as part of the project, then you, the applicant, should apply for an incidental take permit. The Service may issue such a permit if you submit a satisfactory conservation plan for the species that would be affected by your project.

Should your survey determine that federally listed or proposed species occur in the area and are likely to be affected by the project, we recommend that you work with this office and the California Department of Fish and Game to develop a plan that minimizes the project's direct and indirect impacts to listed species and compensates for project-related loss of habitat. You should include the plan in any environmental documents you file.

Critical Habitat

When a species is listed as endangered or threatened, areas of habitat considered essential to its conservation may be designated as critical habitat. These areas may require special management considerations or protection. They provide needed space for growth and normal behavior; food, water, air, light, other nutritional or physiological requirements; cover or shelter; and sites for breeding, reproduction, rearing of offspring, germination or seed dispersal.

Although critical habitat may be designated on private or State lands, activities on these lands are not restricted unless there is Federal involvement in the activities or direct harm to listed wildlife.

If any species has proposed or designated critical habitat within a quad, there will be a separate line for this on the species list. Boundary descriptions of the critical habitat may be found in the Federal Register. The information is also reprinted in the Code of Federal Regulations (50 CFR 17.95). See our [Map Room](#) page.

Candidate Species

We recommend that you address impacts to candidate species. We put plants and animals on our candidate list when we have enough scientific information to eventually propose them for listing as threatened or endangered. By considering these species early in your planning process you may be able to avoid the problems that could develop if one of these candidates was listed before the end of your project.

Species of Concern

The Sacramento Fish & Wildlife Office no longer maintains a list of species of concern. However, various other agencies and organizations maintain lists of at-risk species. These lists provide essential information for land management planning and conservation efforts. [More info](#)

Wetlands

If your project will impact wetlands, riparian habitat, or other jurisdictional waters as defined by section 404 of the Clean Water Act and/or section 10 of the Rivers and Harbors Act, you will need to obtain a permit from the U.S. Army Corps of Engineers. Impacts to wetland habitats require site specific mitigation and monitoring. For questions regarding wetlands, please contact Mark Littlefield of this office at (916) 414-6580.

Updates

Our database is constantly updated as species are proposed, listed and delisted. If you address proposed and candidate species in your planning, this should not be a problem. However, we recommend that you get an updated list every 90 days. That would be October 31, 2010.

Braunton's Milk-Vetch	Astragalus brauntonii	E
California Orcutt Grass	Orcuttia californica	E
Conejo Dudleya	Dudleya abramsii ssp. parva	T
Lyon's Pentachaeta	Pentachaeta lyonii	E
Marcescent Dudleya	Dudleya cymosa ssp. marcescens	T
Salt Marsh Bird's-Beak	Cordylanthus maritimus ssp. maritimus	E
San Fernando Valley Spineflower	Chorizanthe parryi var. fernandina	C
Santa Monica Mountains live-forever	Dudleya cymosa ssp. ovatifolia	T
Slender-Horned Spineflower	Dodecahema (=Centrostephania) leptoceras	E
Ventura Marsh Milk-Vetch	Astragalus pycnostachyus var. lanosissimus	E
Verity's Dudleya	Dudleya verityi	T

Reptile

Blunt-Nosed Leopard Lizard	Gambelia silus	E
Island Night Lizard	Xantusia (=Klauberina) riversiana	T

E - Endangered

PE - Taxa proposed for listing as endangered

T - Threatened

PT - Taxa proposed for listing as threatened

CH - Critical habitat

PCH - Critical habitat which has been proposed

Federally Listed Threatened & Endangered Species Which May Occur In Los Angeles, Orange, San Bernardino, Riverside, San Diego, and Imperial Counties, CA (Carlsbad Fish & Wildlife Office)

Scientific Name	Common Name	Fed. Status	LA	O	SB	Riv	SD	Imp	Date Listed
PLANTS									
<i>Acanthoscyphus</i> (<i>Oxytheca</i>)	Cushenbury oxytheca	E			X				24-Aug-94
<i>parishii</i> var. <i>goodmaniana</i> [1]	San Diego thormmint	T					X		13-Oct-98
<i>Acanthomintha ilicifolia</i>	San Clemente Island lotus	E	X						11-Aug-77
<i>Acmispon</i> (<i>Lotus</i>) <i>dendroideus</i> var. <i>traskiae</i>	Munz's onion	E				X			13-Oct-98
<i>Allium munzii</i>	San Diego ambrosia	E				X	X		2-Jul-02
<i>Ambrosia pumila</i>	Del Mar manzanita	E					X		7-Oct-96
<i>Arctostaphylos glandulosa</i> subsp. <i>crassifolia</i>	marsh sandwort	E	X		X				3-Aug-93
<i>Arenaria paludicola</i>	Bear Valley sandwort	T			X				14-Sep-98
<i>Arenaria ursina</i>	Cushenbury milk-vetch	E			X				24-Aug-94
<i>Astragalus albens</i>	Braunton's milk-vetch	E	X	X		X			29-Jan-97
<i>Astragalus brauntonii</i>	Coachella Valley milk-vetch	E				X			6-Oct-98
<i>Astragalus lentiginosus</i> var. <i>coacheliae</i>	Peirson's milk-vetch	T						X	6-Oct-98
<i>Astragalus magdalenae</i> var. <i>peirsonii</i>	Ventura marsh milk-vetch	E	X	X					21-May-01
<i>Astragalus pycnostachyus</i> var. <i>lanosissimus</i>	coastal dunes milk-vetch	E	X				X		12-Aug-98
<i>Astragalus tener</i> var. <i>titi</i>	triple-ribbed milk-vetch	E			X	X			6-Oct-98
<i>Astragalus tricarlinatus</i>	San Jacinto Valley crownscale	E				X			13-Oct-98
<i>Atriplex coronata</i> var. <i>notatior</i>	Encinitas baccharis	T					X		7-Oct-96
<i>Baccharis vanessae</i>	Nevin's barberry	E	X		X	X	X		13-Oct-98
<i>Berberis nevinii</i>	thread-leaved brodiaea	T	X	X	X	X	X		13-Oct-98
<i>Brodiaea filifolia</i>	ash-gray Indian paintbrush	T			X				14-Sep-98
<i>Castilleja cinerea</i>	San Clemente Island Indian paintbrush	E	X						11-Aug-77
<i>Castilleja grisea</i>	Vail Lake ceanothus	T				X			13-Oct-98
<i>Ceanothus ophiochilus</i>	Catalina Island mountain-mahogany	E	X						8-Aug-97
<i>Cercocarpus traskiae</i>									
<i>Chloropyron maritimum</i> (<i>Cordylanthus maritimus</i>) var. <i>maritimum</i>	salt marsh bird's beak	E	X	X			X		28-Sep-78
(subsp. <i>maritimus</i>) [1]	Orcutt's spineflower	E					X		7-Oct-96
<i>Chorizanthe orcuttiana</i>	San Fernando Valley spineflower	C	X	X	X				25-Oct-99
<i>Chorizanthe parryi</i> var. <i>fernandina</i>	Otay tarplant	T					X		13-Oct-98
<i>Deinandra</i> (<i>Hemizonia</i>) <i>conjugens</i> [1]	San Clemente Island larkspur	E	X						11-Aug-77
<i>Delphinium variegatum</i> subsp. <i>kinkiense</i>	slender-horned spineflower	E	X		X	X			28-Sep-87
<i>Dodecahema</i> (<i>Centrostegia</i>) <i>leptoceras</i> [1]	Santa Monica Mountains dudleya	T	X	X					29-Jan-97
<i>Dudleya cymosa</i> subsp. <i>ovatifolia</i>	Laguna Beach live-forever	T			X				13-Oct-98
<i>Dudleya stolonifera</i>	Santa Ana River woolly-star	E		X	X	X			28-Sep-87
<i>Eriastrum densifolium</i> subsp. <i>sanctorum</i>	Parish's daisy	T			X	X			24-Aug-94
<i>Erigeron parishii</i>	southern mountain wild buckwheat	T			X				14-Sep-98
<i>Eriogonum kennedyi</i> var. <i>austromontanum</i>	Cushenbury buckwheat	E			X				24-Aug-94
<i>Eriogonum ovalifolium</i> var. <i>vineum</i>	San Diego button celery	E				X	X		3-Aug-93
<i>Eryngium aristulatum</i> var. <i>parishii</i>	Mexican flannelbush	E					X		13-Oct-98
<i>Fremontodendron mexicanum</i>	Orcutt's hazardia	C					X		4-May-04
<i>Hazardia orcuttii</i>	Island rush-rose	T	X						31-Jul-97
<i>Helianthemum greenei</i>	San Clemente Island woodland star	E	X						8-Aug-97
<i>Lithophragma maximum</i>	San Clemente Island bush mallow	E	X						11-Aug-77
<i>Malacothamnus clementinus</i>	willow monardella	E					X		13-Oct-98
<i>Monardella linoides</i> subsp. <i>viminea</i>	spreading navarretia	T	X			X	X		13-Oct-98
<i>Navarretia fossalis</i>	California Orcutt grass	E	X			X	X		3-Aug-93
<i>Orcuttia californica</i>	Lyon's pentachaeta	E	X						29-Jan-97
<i>Pentachaeta lyonii</i>	Brand's phacelia	C	X			X	X		4-May-04
<i>Phacelia stellaris</i>									
<i>Physaria</i> (<i>Lesquerella</i>) <i>kingii</i> subsp. <i>bernardina</i> [1]	San Bernardino Mountains bladderpod	E			X				24-Aug-94
<i>Poa atropurpurea</i>	San Bernardino bluegrass	E			X		X		14-Sep-98
<i>Pogogyne abramsii</i>	San Diego mesa mint	E					X		28-Sep-78
<i>Pogogyne nudiuscula</i>	Otay mesa mint	E					X		3-Aug-93
<i>Rorippa gambellii</i>	Gambel's watercress	E	X	X	X		X		3-Aug-93
<i>Sibara filifolia</i>	Santa Cruz Island rock-cress	E	X						8-Aug-97
<i>Sidalcea pedata</i>	pedate checker-mallow	E			X				31-Aug-84
<i>Taraxacum californicum</i>	California taraxacum	E			X				14-Sep-98

<i>Thelypodium stenopetalum</i>	slender-petaled mustard	E		X			31-Aug-84
<i>Trichostema</i>							
<i>austromontanum</i> subsp. <i>compactum</i>	Hidden Lake bluecurls	T			X		14-Sep-98
<i>Verbesina dissita</i>	big-leaved crown beard	T		X			7-Oct-96
INVERTEBRATES							
<i>Branchinecta lynchi</i>	vernal pool fairy shrimp	T			X		19-Sep-94
<i>Branchinecta sandiegonensis</i>	San Diego fairy shrimp	E		X		X	3-Feb-97
<i>Dinacoma caseyi</i>	Casey's June beetle	pE				X	9-Jul-09
<i>Euphilotes battoides allyni</i>	El Segundo blue butterfly	E		X			1-Jun-76
<i>Euphydryas editha quino</i>	Quino checkerspot butterfly	E		X	X	X	16-Jan-97
<i>Glaucopsyche lygdamus palosverdesensis</i>	Palos Verdes blue butterfly	E		X			2-Jul-80
<i>Pyrgus ruralis lagunae</i>	Laguna Mountains skipper	E				X	16-Jan-97
<i>Rhaphiomidas terminatus abdominalis</i>	Delhi Sands flower-loving fly	E			X	X	23-Sep-93
<i>Streptocephalus woottoni</i>	Riverside fairy shrimp	E		X	X	X	3-Aug-93
FISH							
<i>Catostomus santaanae</i>	Santa Ana sucker	T		X	X	X	12-Apr-00
<i>Cyprinodon macularius</i>	desert pupfish	E				X	31-Mar-86
<i>Eucyclogobius newberryi</i>	tidewater goby	E		X		X	4-Feb-94
<i>Gasterosteus aculeatus williamsoni</i>	unarmored threespine stickleback	E		X		X	13-Oct-70
<i>Gila bicolor mohavensis</i>	Mohave tui chub	E			X		13-Oct-70
<i>Gila elegans</i>	bonytail chub	E			X	X	23-Apr-80
<i>Oncorhynchus mykiss</i>	southern steelhead (So Cal DPS)	E		X	X		5-Jan-06
<i>Ptychocheilus lucius</i>	Colorado squawfish	E			X	X	24-Jul-85
<i>Xyrauchen texanus</i>	razorback sucker	E			X	X	23-Oct-91
AMPHIBIANS							
<i>Anaxyrus californicus</i> (B. <i>microscaphus</i> c.) [1]	arroyo toad (a. southwestern t.)	E		X	X	X	16-Dec-94
<i>Batrachoseps aridus</i>	desert slender salamander	E				X	4-Jun-73
<i>Rana draytoni</i>	California red-legged frog	T		X	X	X	23-May-96
<i>Rana muscosa</i> (So Cal DPS)	mountain yellow-legged frog	E		X		X	2-Jul-02
REPTILES							
<i>Gopherus agassizii</i>	desert tortoise	T			X	X	2-Apr-90
<i>Phrynosoma mcallii</i>	flat-tailed horned lizard	pT				X	29-Nov-93
<i>Uma inornata</i>	Coachella Valley fringe-toed lizard	T				X	25-Sep-80
<i>Xantusia riversiana</i>	island night lizard	T		X			11-Aug-77
BIRDS							
<i>Amphispiza belli clementae</i>	San Clemente sage sparrow	T		X			11-Aug-77
<i>Brachyramphus marmoratus</i>	marbled murrelet	T		X		X	1-Oct-92
<i>Charadrius alexandrinus nivosus</i>	western snowy plover	T		X	X	X	5-Mar-93
<i>Coccyzus americanus</i>	yellow-billed cuckoo	C		X	X	X	25-Jul-01
<i>Empidonax traillii eximius</i>	southwestern willow flycatcher	E		X	X	X	27-Feb-95
<i>Gymnogyps californianus</i>	California condor	E		X	X	X	16-Oct-96
<i>Haliaeetus leucocephalus</i>	bald eagle	PDM		X	X	X	12-Jul-95
<i>Lanius ludovicianus mearnsi</i>	San Clemente loggerhead shrike	E		X			11-Aug-77
<i>Pelecanus occidentalis</i>	brown pelican	PDM		X	X	X	4-Feb-85
<i>Phoebastria albatrus</i>	short-tailed albatross	E		X	X	X	31-Jul-00
<i>Polioptila californica californica</i>	coastal California gnatcatcher	T		X	X	X	30-Mar-93
<i>Rallus longirostris levipes</i>	light-footed clapper rail	E		X	X		13-Oct-70
<i>Rallus longirostris yumanensis</i>	Yuma clapper rail	E			X	X	11-Mar-67
<i>Sternula (Sterna) antillarum browni</i> [1]	California least tern	E		X	X	X	2-Jun-70
<i>Vireo bellii pusillus</i>	least Bell's vireo	E		X	X	X	2-May-86
MAMMALS							
<i>Dipodomys merriami parvus</i>	San Bernardino kangaroo rat	E		X	X	X	24-Sep-98
<i>Dipodomys stephensi</i>	Stephens' kangaroo rat	E			X	X	30-Sep-88
<i>Enhydra lutris nereis</i>	southern sea otter	T/X*		X	X	X	11-Aug-87
<i>Ovis canadensis nelsoni</i>	Peninsular bighorn sheep	E				X	18-Mar-98
<i>Perognathus longimembris pacificus</i>	Pacific pocket mouse	E		X	X	X	29-Sep-94
<i>Spermophilus tereticaudus chlorus</i>	Palm Springs ground squirrel	C				X	25-Oct-99
<i>Urocyon littoralis catalinae</i>	Santa Catalina Island fox	E		X			5-Mar-04

Status: E = Federally endangered; T = Federally threatened; C = Federal candidate for listing; P = proposed; PDM=subject to post delisting monitoring
 XN: Experimental population; * southern sea otter first listed as threatened Jan. 14, 1977 42:2968
 CH = Critical Habitat; p = Proposed; f = Designated; np=Not Prudent; pr = Proposed Revised; fr = Final Revised; W* = proposal withdrawn
 RP = Recovery Plan; F= Final, D= Draft
 County Reported: LA = Los Angeles; O = Orange; SB = San Bernardino; Riv = Riverside; SD = San Diego; Imp = Imperial
 Note: Santa Catalina Isl. and San Clemente Isl. are in L.A. County
 [1] Name under which the species was listed is in parentheses. This form should be cited at least in the beginning of a document, otherwise use the current name throughout.
